

Formula for determining decrease from baseline

By Laura A. Riffel, Ph.D.

Formula for Baseline

$$(I-B)/B = D * 100$$

Intervention Frequency = 3 times per day

Baseline Frequency = 34 times per day

$$3 - 34 = -31$$

$$-31 / 34 = .91176$$

$$.91 * 100 =$$

91% **D**ecrease in Behavior
